1.1 $A = \{a^n \mid n \geq 0\}$ $a^3 = aaa$

Assume A is regular

Choose $S = a^p$ where p is the pumping length

By Pumping Lemma S can be decomposed into $S = xyz$ where

① $xy^iz \in A$

② $|y| > 0$

③ $|xy| \leq p$

By 3, $|xy| \leq p$ so $|y| \leq p$

Since $|xy^2z| = p^3$

$|xy^2z| \leq p^3 + |y| = p^3 + p$

But $p^3 + p < p^3 + 3p^2 + 3p + 3 = (p+1)^3$

Since $p^3 < |xy^2z| < (p+1)^3$ as $|y| \geq 1$

$\therefore xy^2z \notin A$ and contradicts the PL

so A is irregular \square

5.2 $B = \{ 0^n 1^m 0^n \mid m, n \geq 0 \}$

Assume B is regular

Choose $S = 0^p 1 0^p$ where p is the pumping length

By Pumping Lemma S can be decomposed into

$S = xyz$ where

① $xyz \in B$

② $|y| \geq 1$

③ $|xy| \leq p$

By ③ $|xy| \leq p$ y contains 0 s

So $xyyz \notin B$ because there are more zeros on the left side of the one than the right

$\therefore B$ is not regular due to the contradiction in the ① condition in the Pumping Lemma
